

(If you know **C++**, then go for C#)

(If you know **VB**, then go for VB.NET)

➤ ➤ ➤ ➤ ➤

C#

int i ;

.cs

CSC

myfile.cs

.EXE

MSIL

→ System.Int32 i

VB.NET

dim i as integer;

.vb

VBC

myfile.vb

.EXE

MSIL

→ System.Int32 i

.exe

msil

→ .NET Framework (this installs CLR and supporting libraries)

→ Windows OS

→ Machine

converts msil into binary and then gives it as a feed to cpu
